Git Cheat Sheet

1. Git configuration

- **Git config**

  Get and set configuration variables that control all facets of how Git looks and operates.

  Set the name:

  ```
  $ git config --global user.name "User name"
  ```

  Set the email:

  ```
  $ git config --global user.email  "himanshudubey481@gmail.com"
  ```

  Set the default editor:

  ```
  $ git config --global core.editor Vim
  ```

  Check the setting:

  ```
  $ git config -list
  ```

- **Git alias**

  Set up an alias for each command:

  ```
  $ git config --global alias.co checkout
  $ git config --global alias.br branch
  $ git config --global alias.ci commit
  $ git config --global alias.st status
  ```

2. Starting a project

- **Git init**

  Create a local repository

  ```
  $ git init <Repo Name>
  ```

- **Git clone**

Make a local copy of the server repository.

```
$ git clone <remote Url>
```

3. Local changes

- **Git add**

  Add a file to staging (Index) area

  ```
  $ git add Filename
  ```

  Add all files of a repo to staging (Index) area

  ```
  $ git add*
  ```

- **Git commit**

  Record or snapshots the file permanently in the version history **with a message**

  ```
  $ git commit -m " Commit Message"
  ```

4. Track changes

- **Git diff**

  Track the changes that have not been staged:

  ```
  $ git diff
  ```

  Track the changes that have staged but not committed:

  ```
  $ git diff --staged
  ```

  Track the changes after committing a file:

  ```
  $ git diff HEAD
  ```

  Track the changes between two commits:

  ```
  $ git diff <commit1-sha> <commit2-sha>
  ```

  Git Diff Branches:

  ```
  $ git diff <branch 1> < branch 2>
  ```

- **Git status**

Display the state of the working directory and the staging area.

```
$ git status
```

- **Git show**

  Shows objects:

```
$ git show <options> <objects>
```

5. Commit History

- **Git log**

  Display the most recent commits and the status of the head:

```
$ git log
```

  Display the output as one commit per line:

```
$ git log –oneline
```

  Displays the files that have been modified:

```
$ git log –stat
```

  Display the modified files with location:

```
$ git log -p
```

- **Git blame**

  Display the modification on each line of a file:

```
$ git blame <file name>
```

6. Ignoring files

- **.gitignore**

  Specify intentionally untracked files that Git should ignore.

  Create .gitignore:

```
$ touch .gitignore
```

  List the ignored files:

```
$ git ls-files -i --exclude-standard
```

7. Branching

- **Git branch**

  Create branch:

  ```
  $ git branch  <branch name>
  ```

  List Branch:

  ```
  $ git branch --list
  ```

  Delete Branch:

  ```
  $ git branch -d<branch name>
  ```

  Delete a remote Branch:

  ```
  $ git push origin -delete <branch name>
  ```

  Rename Branch:

  ```
  $ git branch -m <old branch name><new branch name>
  ```

- **Git checkout**

  Switch between branches in a repository.

  Switch to a particular branch:

  ```
  $ git checkout <branch name>
  ```

  Create a new branch and switch to it:

  ```
  $ git checkout -b <branchname>
  ```

  Checkout a Remote branch:

  ```
  $ git checkout <remotebranch>
  ```

- **Git stash**

  Switch branches without committing the current branch.

  Stash current work:

```
$ git stash
```

Saving stashes with a message:

```
$ git stash save "<Stashing Message>"
```

Check the stored stashes:

```
$ git stash list
```

Re-apply the changes that you just stashed

```
$ git stash apply
```

Track the stashes and their changes:

```
$ git stash show
```

Re-apply the previous commits:

```
$ git stash pop
```

Delete a most recent stash from the queue:

```
$ git stash drop
```

Delete all the available stashes at once:

```
$ git stash clear
```

Stash work on a separate branch:

```
$ git stash branch <branch name>
```

- **Git cherry pic**

  Apply the changes introduced by some existing commit:

  ```
  $ git cherry-pick <commit id>
  ```

8. Merging

- **Git merge**

  Merge the branches:

  ```
  $ git merge <branch name>
  ```

Merge the specified commit to currently active branch:

```
$ git merge <commit>
```

- **Git rebase**

  Apply a sequence of commits from distinct branches into a final commit.

  ```
  $ git rebase <branch name>
  ```

  Continue the rebasing process:

  ```
  $ git rebase –continue
  ```

  Abort the rebasing process:

  ```
  $ git rebase --skip
  ```

- **Git interactive rebase**

  Allow various operations like edit, rewrite, reorder, and more on existing commits.

  ```
  $ git rebase -i
  ```

9. Remote

- **Git remote**

  Check the configuration of the remote server:

  ```
  $ git remote -v
  ```

  Add a remote for the repository:

  ```
  $ git remote add <short name><remote URL>
  ```

  Fetch the data from remote server

  ```
  $ git fetch <Remote>
  ```

  Remove a remote connection from the repository:

  ```
  $ git remote rm <destination>
  ```

  Rename remote server:

  ```
  $ git remote rename <old name><new name>
  ```

Show additional information about a particular remote:

```
$ git remote show <remote>
```

Change remote:

```
$ git remote set-url <remote name><newURL>
```

- **Git origin master**

  Push data to remote server:

  ```
  $ git push origin master
  ```

  Pull data from remote server:

  ```
  $ git pull origin master
  ```

10. Pushing Updates

- **Git push**

  Transfer the commits from your local repository to a remote server.

  Push data to remote server:

  ```
  $ git push origin master
  ```

  Force push data:

  ```
  $ git push <remote><branch> -f
  ```

  Delete a remote branch by push command:

  ```
  $ git push origin -delete edited
  ```

11. Pulling updates

- **Git pull**

  Pull the data from the server:

  ```
  $ git pull origin master
  ```

  Pull a remote branch:

  ```
  $ git pull <remote branch URL>
  ```

- **Git fetch**

  Downloads branches and tags from one or more repositories.

  Fetch the remote repository:

  ```
  $ git fetch< repository Url>
  ```

  Fetch a specific branch:

  ```
  $ git fetch <branch URL><branch name>
  ```

  Fetch all the branches simultaneously:

  ```
  $ git fetch –all
  ```

  Synchronize the local repository:

  ```
  $ git fetch origin
  ```

12. Undo changes

- **Git revert**

  Undo the changes

  ```
  $ git revert
  ```

  Revert a particular commit:

  ```
  $ git revert <commit-ish>
  ```

- **Git reset**

  Reset the changes:

  ```
  $ git reset –hard
  $ git reset –soft
  $ git reset --mixed
  ```

13. Removing files

- **Git rm**

Remove the files from the working tree and from the index:

```
$ git rm <file Name>
```

Remove files from the Git But keep the files in your local repository:

```
$ git rm --cached
```
